## Case Study

### Materials supplied:

CEDEC Red Footpath Gravel

When Canary Wharf was being built we were asked for a footpath gravel with no lime content as the client was concerned not to affect the pH levels in the soil in the tree pits. Much thought and some good luck found both CEDEC red and gold.

This remarkable product provided a solution to the clients problem as the material does not set but packs tightly creating a footpath whilst remaining porous.

The result was then seen by others and sales have continued to grow ever since. CEDEC is also now available in silver, bronze and green.
