

Safe play
with
Gravelsafe

The natural roundness of this product works almost like a liquid when faced with the impact of an object. The pebbles roll against each other thus creating exceptional impact absorbing properties in situations where children jump or fall from climbable play equipment.

British Standard
Compliant

Gravelsafe conforms to BS EN 1176 (testing in accordance with BS EN 1177) for intended use as an impact absorbing safety surface.

Natural and
Long Lasting

Natural Stone is a pure resource from the earth, the Gravelsafe pebbles have been naturally water worn and will have an infinite life blending into the natural landscape.
